

Interface Definition Table			
Name	Type	Value	Description
usr_in_img	User input	Image path	Receive Inputs: <ul style="list-style-type: none"><li>Image</li><li>File path to an image</li></ul>
usr_in_gcode	User input	G-CODE file path	Receive inputs: <ul style="list-style-type: none"><li>G-CODE file</li></ul>
usr_in_trm	User input	Terminal input	Receive inputs: <ul style="list-style-type: none"><li>Terminal inputs</li><li>Manual G-CODE commands</li></ul>
usr_out_img	User output	Image	Display: <ul style="list-style-type: none"><li>Edge detection image</li><li>2D array</li></ul>
usr_out_arr	User Output	Array	Output: <ul style="list-style-type: none"><li>Edge detection values converted to an array</li></ul>
img_arr	Image array	2D array	<ul style="list-style-type: none"><li>2D array of values</li></ul>
gcode	G-CODE file	G-CODE	G-CODE file containing G-CODE commands. Output form MATLAB, and input to the G-CODE parser/GUI and Arduino.
tool_params	Python object: Tool parameters	Python object containing variables for the following values: <ul style="list-style-type: none"><li>float X</li><li>float Y</li><li>float Feed rate</li><li>str Mode</li><li>str Units</li><li>int Current tool</li><li>int Next tool</li></ul>	<ul style="list-style-type: none"><li>Target x-coordinate</li><li>Target y-coordinate</li><li>Target feed rate</li><li>Set tool movement to absolute or relative</li><li>Set units between inches and millimeters</li><li>Keep track of the current tool for switching tools</li><li>Set next tool</li></ul>
comm_out	Python variables: Tool commands	Float values for X, Y, Z, and T positions.	Instantaneous power state <ul style="list-style-type: none"><li>X-axis motion</li><li>Y-axis motion</li><li>Z-axis motion</li><li>Tool switch rotation</li></ul>
USB_in USB_out	Signal and power over USB	Signals contained: <ul style="list-style-type: none"><li>comm_in</li><li>comm_out</li><li>pwr_in</li></ul>	<ul style="list-style-type: none"><li>Communication between host device and Arduino NANO</li><li>Power supply for the Arduino NANO</li></ul>
pwr_in	Power input	Voltage (5V)	<ul style="list-style-type: none"><li>Arduino NANO regulated power supply</li></ul>
pin_out	Arduino PIN output		<ul style="list-style-type: none"><li>Arduino output PINS</li></ul>
step_out	Stepper Output	A+, A-, B+, B-	Pulse voltages from motor controller to stepper motors
pwm_x	x-axis servo PWM	Integer [0, 255]	<ul style="list-style-type: none"><li>Instantaneous feed rate of x-axis servo. Min 0, Max 255 = 6" per second.</li></ul>
pwm_y	y-axis servo PWM	Integer [0, 255]	<ul style="list-style-type: none"><li>Instantaneous feed rate of y-axis servo. Min 0, Max 255 = 6" per second.</li></ul>
pwm_z	z-axis servo PWM	Integer [0, 255]	<ul style="list-style-type: none"><li>Instantaneous feed rate of z-axis servo. Min 0, Max 255.</li></ul>
LEDn_[0..3]	LED indicators	4 sets of LEDs <ul style="list-style-type: none"><li>LED1_[0..3]</li><li>LED2_[0..3]</li><li>LED3_[0..3]</li><li>LED4_[0..3]</li></ul>	4-LEDs for each motor controller. 16 total. LED indicators are wired in parallel with A+, A-, B+, B- for each controller. Wired to ground.
24v_in	24V input	Voltage(24V)	Takes 24V has an input
5v_out	5V output	Voltage(5V)	Output 5V <ul style="list-style-type: none"><li>Giving the Arduino 5V</li><li>Checking the there is 5V being sent out by checking with a LED</li></ul>
